EDUCATION

University of Manitoba — Winnipeg, MB Canada
Bachelor of Science Honours Co-op Computer Science DGPA 3.9 / 4.0 — Expected Aug 2024
Bachelor of Science Major Biochemistry — Graduated

RELEVANT TECHNICAL SKILLS

- JavaScript
- Node.js
- React
- Bootstrap
- Ubuntu
- TypeScript
- Python
- OpenCV
- GeoPandas
- Scikit
- Tensorflow 2
- Java
- JUnit / Espresso
- Mockito
- Android Java
- C / C++
- Catch2
- C#
- SQL
- AWS

RELEVANT EXPERIENCE

Software Engineer — Mar 2023 – Present
Freelance

- Designed and implemented a dashboard system to display and manage railway maintenance jobs with a frontend in Angular TypeScript, backend in ASP.NET core on an IIS server, and a data layer in MS SQL. Developed a map view as a user friendly access point for the most important user tasks with a filtering system to allow the user to view information most relevant to their task.
- Communicated with clients to gather user requirements and proposed solutions to address their needs. Estimated time and effort required to develop requested features. Incorporated feedback into future design and deliverables.

Software Developer, Co-op (Full Stack) — Jan 2023 – Apr 2023
AGCO Corporation

- Implemented new functional React components to display remote sensor data from LoRaWAN endpoints on a dashboard. Converted vanilla JavaScript class based React components to TypeScript functional React components.
- Contributed new backend features in Python to support new API functionality using Chalice/Flask for serverless AWS applications running in Docker containers. Implemented Python classes to support changes in LoRaWAN endpoint firmware.
- Managed local dev environments in Docker containers to run CI/CD pipelines locally.
- Created PyTest and Jest, unit and integration tests to validate code functionality and verify implementation.
- Participated in Scrum activities: code reviews, standups, retrospectives, sprint planning.

Research Technician — Feb 2011 - Present
Canadian Grain Commission, Government of Canada

- Created an ETL pipeline in Python to scrape weather data and collect the information in a PostGres DB. Created dockerfiles to build custom development environment based on Nvidia docker images. Used scikit-learn and Tensorflow to explore ML/AI models for the prediction of crop quality from weather data.
- Developed programs in C# to extract data and add custom functions to instrument control software to speed up data analysis.
- Developed VBA scripts used across Canada to automate data handling in Excel for the evaluation of research data.
- AWS cloud administration. Designed and maintained a network of Windows and Linux EC2 instances to trial data analysis on the cloud with deployment scripts for users to automate ssh tunneling, instance start/stop, RDP connection, and deployment of Jupyter notebook servers.
- Designed and fabricated an Atmel SAMD based robotic liquid sampling and dispensing system with firmware written in C++
- Gathered software requirements from stakeholders internal and external to the organization. Implemented new features based on user feedback.
- Contributed to data collection, analysis, and authoring research papers. Conducted journal searches and wrote review summaries of the current state of research on topics of interest.
- Planned research projects. Occasionally supervised and allocated tasks for teams of 4-15 students and technicians.

PROJECTS

Personal cloud / Home Lab | ZFS, Linux, GCP, AWS, Virtualbox, Docker, HTML, CSS, JavaScript — 2015 - Present

- Network of multiple LAN hosted, cloud hosted, and hypervisor hosted web services
- Mixture of LAN Linux and Windows hosts; Linux hosts on AWS that run applications in docker to provide VPN, Reverse Proxy, SOCKS5, SSH, remote desktop, content delivery, server monitoring and other services.

Forest Fire Prediction Model | Python, Docker, PostGres, QGIS, GeoPandas, sklearn, Tensorflow — 2022

- Used Python to scrape data from weather stations nearest forest fires reported in Saskatchewan in the past 20 years
- Extended PostGres and Nvidia Tensorflow containers to build dev environments for machine learning
- Trained and evaluated SVM and Random Forest models for forest fire severity prediction using weather data

PROJECTS cont

Meal Planner Calorie Tracking App | Android, Java, JUnit, Espresso, HSQLDB 2022

- With a team of 5, designed and built a Java Android app following Agile development practices
- Applied software design patterns, implemented object oriented class design, and thorough unit testing
- Implemented a relational database in Hyper SQL DB to store application data. Followed a 3 layer architecture.

Piston Pump | Fusion360, KiCAD, C++, Atmel SAMD 2019 - 2022

- Designed and built a piston based liquid delivery device that exceeded ASTM class A standards for accuracy and delivery speed
- Designed touchscreen interface for human interaction, control, calibration, error recovery

City Winnipeg Database | Python, Qt, SQLite, Google Maps API, GeoPandas, Pandas 2021

- Combined multiple open data sources about the City of Winnipeg into a 3NF and BCNF normalized relational database
- Used Google Maps API to get asset geographic coordinates and used GeoPandas to measure distances and regional inclusions
- Created Windows, Linux cross platform GUI program in Python to run queries against SQLite DB

Fuzzy video content matcher | C/C++, Python, Ubuntu 2020 - 2022

Perceptual hashing to find similar videos. Implemented a python script on Linux to use Facebook TMK+PDQF algorithm

3D Printer | Fusion360, C++, RAMPS, Arduino Mega, RaspberryPi 2014 - 2017

Designed and built an FDM 3D printer with control and monitoring via web interface

Wireless controllable outlet hub | C/C++, HTML, CSS, JS, esp8266 2016

Lan/Wifi connected hub for controlling remote switches over 433mhz with cross platform embedded web page for control

EXTRACURRICULAR

University Drone Club | Git, C/C++, Python, OpenCV, Qgroundcontrol 2022 - 2023

- Created QR code reader to parse drone waypoints, and GPS boundary points to avoid
- Developed algorithm to avoid a Geo boundary and find a path to the next waypoint
- Developed system to build json files with updated Qgroundcontrol mission and upload the new mission via MAVLink
- Created AI subsystem to autonomously identify people, measure distance, and track movement from an airborne drone

University Dev Club Hackathon | Git, Python, OpenCV, Mediapipe 2023

Implemented gesture recognition on top of the MediaPipe ML library to create a hand tracking mouse in 12hrs

University Biomedical Engineering club Gaming Head Mouse | C/C++, Mbed OS 2021 - 2022

Created a head mounted gyroscopic joystick to allow a disabled gamer play with head movements

Magpie CTF Hackathon| Ghidra, IDA Free, Ollydbg, HTML, CSS, JS, C/C++, Go 2021

Participated in a capture the flag hackathon involving reverse engineering and penetration testing

Hobbies

Obstacle Course Racing

Trained and participated in 6 5K, 10K, 21K Spartan races , Attended Tough Mudder Twice , a few Mud Hero's

Rock Climbing

Mostly indoor bouldering up to 3/5 4 if I try really hard. Sometimes top rope out doors on some easy routes.

Lunch ball hockey and tennis

I've been to some workplaces near tennis courts and to some with open parking lots where they set up goals and enjoy the casual sports with colleagues
